## *Donald C. Balfour Alumni Award for Meritorious Research – 2022 Nomination* (continued)

The Donald C. Balfour Alumni Award is given annually in recognition of accomplishment in novel hypothesis-driven, clinical/patient oriented, or basic science research. Research that involves the translation of basic scientific findings into clinical practice at the patient or the population level is ideal.

Candidates for this award must be residents or fellows with a clinical appointment in medical and laboratory specialties, surgery and surgical specialties, or internal medicine and medical specialties. Eligibility is limited to individuals within 10 years of receipt of their postgraduate degree and whose nominated research represents work from their first postdoctoral fellowship. Candidates eligible for the award must have a current appointment or completed their appointment within 1 year prior to nomination.

Nominations for the award are provided by faculty members and accompanied by a curriculum vitae and explanatory letters of recommendation from one or more faculty advisors of the nominee. While these are the basis for preliminary selection of candidates for the award, it may be necessary to supplement this information with consultation with the advisers and others familiar with the research. Selection for the award is based upon the following criteria.

- Originality and significance of research results
- Strength of letters of recommendation
- Number of original publications (as first or second author), especially those resulting from the nominated line of research
- Number of research or other academic awards
- Initiative and independent work by the nominee in accomplishing the research

Neither final publication of the research nor completion of a thesis for a graduate degree are prerequisite to consideration for the award; however, these accomplishments strengthen the application. Presentation of the research at local or national meetings and/or assurance of the adviser that the material is being prepared for publication or for submission to the Mayo Clinic School of Graduate Medical Education Committee as a thesis will be considered by the committee as evidence of completion of the research. Generally, the research nominated for this award should have been completed within the year or two preceding the nomination.

The award is presented at a scheduled meeting of the Alumni Association. If circumstances permit, the candidate will be invited to present their research at a scientific program of the association.
